

PRESS RELEASE

RENFORTH RESOURCES INC.

65 Front Street East, Suite 304, Toronto, Ontario, M5E 1B5

RENFORTH INCREASES INFERRED RESOURCE 18%

Toronto – July 17, 2014 – Renforth Resources Inc. (CSE: RFR) (“Renforth” or the “Company”) is pleased to announce that recent drilling on the Thompson-Cadillac Mine area resulted in an 18% increase to the inferred resource, a total of 237,000 ounces Au contained in 3,505,000 tonnes with a grade of 2.1g/t Au using a cut-off of 0.75 g/t Au.

“An 18% increase to the inferred resource, all located above 200m depth, for our New Alger project is an excellent result, we know our model is correct, the mineralization is predictable. This is the beginning for this property, we have additional in-fill drilling to do above 200m, within the current resource, we also will start to examine the Pontiac Vein system to the south and the Thompson-Cadillac Mine vein system below the 200m resource limits. In both instances gold has been intersected in drillholes, in the Pontiac system the southern part of the system was intersected in 2007, in the Thompson-Cadillac Mine area deeper drilling in 2007 intersected gold at a depth of 390m, deeper than the extent of the historic mine workings. The potential to continue adding ounces on this property is quite exciting.” states Nicole Brewster, President and CEO of Renforth.

July 2014 New Alger Resource Statement

Thompson-Cadillac Mine Area

Class	Tonnes	Au g/t	Total Oz
Inferred	3,505,000	2.1	237,000

- (1) Mineral resources which are not mineral reserves do not have demonstrated economic viability. The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.*
- (2) The quantity and grade of reported inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these inferred resources as an Indicated or Measured mineral resource and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured mineral resource category.*
- (3) The mineral resources in this press release were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by CIM Council.*

This resource update has been calculated by Mr. Phillip Burt P.Geo and Mr. Brian H. Newton P.Geo, consultants to the Company. This resource is an update to the previously released April 2014 resource (press released April 3, 2014). Drill results press released June 17, 2014, form the basis of the update announced above. Assay results in that program were obtained from drillcore samples selected in the field, bagged and tagged, then security sealed under the supervision of Brian H. Newton

P. Geo, these samples were then personally delivered to the facilities of Activation Laboratories in Val d'Or Quebec. The samples were fire assayed for gold. The technical contents of this press release have been reviewed and approved by Mr. Brian H. Newton P. Geo, a "qualified person" pursuant to National Instrument 43-101.

ABOUT RENFORTH

Renforth Resources Inc. is a Toronto-based exploration company with interests in two exploration assets: the previously productive New Alger property, located in the Cadillac Break Mining Camp, Québec, and the Mina Pilar Project, located SW of Madrid Spain, also a historic producer of gold.

Forward Looking Statements

This news release contains forward-looking statements and information under applicable securities laws, including with respect to the estimation of a NI 43-101 compliant resource at the New Alger project and an outlook regarding future exploration and an ability to add ounces at the project. All statements, other than statements of historical fact, are forward looking. Forward-looking statements are frequently identified by such words as 'may', 'will', 'plan', 'expect', 'believe', 'anticipate', 'estimate', 'intend' and similar words referring to future events and results. Such statements and information are based on the current opinions and expectations of management. All forward-looking information is inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including the speculative nature of mineral exploration and development, fluctuating commodity prices, the risks of obtaining necessary approvals, licences and permits and the availability of financing, as described in more detail in the Company's securities filings available at www.sedar.com. Actual events or results may differ materially from those projected in the forward-looking statements and the reader is cautioned against placing undue reliance thereon. Forward-looking information speaks only as of the date on which it is provided and the Company assumes no obligation to revise or update these forward-looking statements except as required by applicable law.
