

PRESS RELEASE

Renforth Commences Parbec Resource Calculation

Toronto – February 11, 2016 – Renforth Resources Inc. (CSE: RFR) (“Renforth” or the “Company”) is pleased to announce that the calculation of an initial NI 43-101 compliant resource statement for the Parbec property has commenced, utilizing the proprietary database and model of the mineralization Renforth compiled and built, and based upon Renforth’s interpretation which was press released January 14th, 2016. The Parbec property boasts, in addition to Renforth’s recent surface work confirming the presence of additional gold bearing lithologies on the property not previously considered in historic calculations, more than 25,000 m of drilling and a 580 m ramp which currently ends at a depth of ~100m. Upon dewatering this ramp will provide underground access for sampling several of the lithologies and additional drilling. Renforth has determined that dewatering, once permitted, could be achieved in as little as a day with an appropriate sized pump.

Parbec Ramp in 1988

Technical information presented in this press release has been reviewed and approved by Brian H. Newton P. Geo, a “qualified person” pursuant to National Instrument 43-101.

ABOUT RENFORTH

Renforth Resources Inc. is a Toronto-based gold exploration company with interests in two of Canada’s gold exploration camps. In the Cadillac-Malartic Gold Camp the Company holds the New Alger project, with an inferred resource of 237,000 ounces of gold above a depth of 200 metres contained in 3,505,000 tonnes with a grade of 2.1g/t Au using a cut-off of 0.75 g/t Au (see press release July 17, 2014) as calculated by Brian H. Newton P. Geo and Philip Burt P. Geo, which is located on the Cadillac Break outside of Cadillac, Quebec and an option to purchase 100% of the Parbec Property from Globex Mining Enterprises Inc. (GMX-TSE), a historically identified gold occurrence with more than 100 drillholes completed and a ramp into the mineralization in place located outside of Malartic, Quebec, contiguous to the Canadian Malartic open pit mine. In Ontario the Company has the right to earn a 55% interest in the Nixon-Bartleman project, located on the Porcupine-Destor fault in the West Timmins Mining area, another historic gold occurrence with a couple of old shallow pits onsite and a history of past drilling which has not yet defined the gold occurrence.

Forward Looking Statements

This news release contains forward-looking statements and information under applicable securities laws. All statements, other than statements of historical fact, are forward looking. Forward-looking statements are frequently identified by such words as 'may', 'will', 'plan', 'expect', 'believe', 'anticipate', 'estimate', 'intend' and similar words referring to future events and results. Such statements and information are based on the current opinions and expectations of management. All forward-looking information is inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including the speculative nature of mineral exploration and development, fluctuating commodity prices, the risks of obtaining necessary approvals, licenses and permits and the availability of financing, as described in more detail in the Company's securities filings available at www.sedar.com. Actual events or results may differ materially from those projected in the forward-looking statements and the reader is cautioned against placing undue reliance thereon. Forward-looking information speaks only as of the date on which it is provided and the Company assumes no obligation to revise or update these forward-looking statements except as required by applicable law.
