

The compilation map demonstrates a correlation between Renforth’s surface sampling in red, historic trenches indicated with yellow stars, underground development and Renforth’s drilling, this all suggests the occurrence of an additional gold bearing system within the 200 metres separating the Thompson-Cadillac Mine workings and the Pontiac Vein System. The Pontiac Vein System is open, unconstrained, in both east-west and north-south directions.

### 2014 Winter Extension Campaign

This campaign, begun in the fall, wrapped up in a surprise winter storm resulting in significant snowfall and freezing conditions, causing stoppage of the surface channel cutting efforts. A total of nine channels were cut over an E/W distance of fifty metres, which together with additional outcrop clearing extends the surface expression of the Pontiac Vein System by >15%. Assay results on a per channel basis appear below, findings from the lab included the observation that the gold recovered in samples was coarse, contributing to a “nugget effect”. This condition has been historically noted on the New Alger property with records indicating approximately 60% of the previously mined gold was free-milling, in part from spectacular visible gold (New Alger Property, B.E. Gorman for Sulpetro Minerals Limited, 1984 – SIGEOM file #GM41724). The “nugget effect” can result in gold grade values being reported lower due to the loss of gold material in the assay process.

The table below illustrates assay results obtained for the new channels (1, and 4 through 9) as well as the extensions to previous Renforth channels from the summer surface campaign (2, 3 and 3B).

Channel	Samples	Interval
1	045054-58	0.160g/t Au /2.9m
4	045049-53	0.164g/t Au /2.3m
5	045035-48	0.140g/t Au /6.1m
<i>including</i>	<i>045047</i>	<i>0.663g/t Au /0.6m</i>
6	045027-34	2.197g/t Au /4.2m
<i>including</i>	<i>040530-34</i>	<i>3.781g/t Au /2.0m</i>
<i>including</i>	<i>045031</i>	<i>11.600g/t Au /0.5m</i>
7	045018-26	0.117g/t Au /4.4m
8	045011-17	0.145g/t Au /4.0m
<i>including</i>	<i>045011-13</i>	<i>0.169g/t Au /3.0m</i>
9	045001-10	0.363g/t Au / 6.2m
<i>including</i>	<i>045001-13</i>	<i>0.857g/t Au /1.9m</i>
A1+3+3B	045059-67+0406970-71	1.631g/t Au /6.7m
<i>including</i>	<i>045060-63+1406971</i>	<i>3.412g/t Au /3.0m</i>
<i>including</i>	<i>1406970</i>	<i>12.326g/t Au /0.7m</i>
A2+2	045068-69+1406972-76	0.056g/t Au /3.2m

Samples taken in this program were selected in the field by Brian H. Newton P.Geol and a “Qualified Person” pursuant to the requirements in National Instrument 43-101. The samples were bagged, tagged and security sealed and transported to the facilities of Agat Laboratories

by bonded courier for sample preparation and assaying. The samples were assayed using “202-052” fire assay for gold with an ICP-OES finish. A gravimetric finish was employed for Au overlimits. Multiple duplicates were tested on several samples to assess the style of gold mineralization.

The technical contents of this press release have been reviewed and approved by Brian H. Newton P.Geol.

#### **ABOUT RENFORTH**

Renforth Resources Inc. is a Toronto-based gold exploration company with interests in two of Canada’s gold exploration camps, the New Alger project, with an inferred resource of 237,000 ounces of gold above a depth of 200 metres contained in 3,505,000 tonnes with a grade of 2.1g/t Au using a cut-off of 0.75 g/t Au (see press release July 17, 2014), located on the Cadillac Break outside of Rouyn, Quebec and the Nixon-Bartleman project, located on the Porcupine-Destor fault in the West Timmins Mining area.

#### Forward Looking Statements

This news release contains forward-looking statements and information under applicable securities laws. All statements, other than statements of historical fact, are forward looking. Forward-looking statements are frequently identified by such words as ‘may’, ‘will’, ‘plan’, ‘expect’, ‘believe’, ‘anticipate’, ‘estimate’, ‘intend’ and similar words referring to future events and results. Such statements and information are based on the current opinions and expectations of management. All forward-looking information is inherently uncertain and subject to a variety of assumptions, risks and uncertainties, including the speculative nature of mineral exploration and development, fluctuating commodity prices, the risks of obtaining necessary approvals, licenses and permits and the availability of financing, as described in more detail in the Company’s securities filings available at [www.sedar.com](http://www.sedar.com). Actual events or results may differ materially from those projected in the forward-looking statements and the reader is cautioned against placing undue reliance thereon. Forward-looking information speaks only as of the date on which it is provided and the Company assumes no obligation to revise or update these forward-looking statements except as required by applicable law.
